- Highlight: **pvc decorative film 1000mm,
Cold Lamination pvc decorative film,
1000mm pvc interior film**

Product Description

Product Description:

Material Characteristics and Variety of PVC Foil

Our PVC foil is primarily made from Polyvinyl Chloride (PVC), a synthetic plastic material recognized for its resilience, durability, flexibility, and ease of application in various projects. It is available in a large variety of colors, patterns, and textures, capable of mimicking the look and appeal of natural materials such as wood, stone, fabric, or metal. As a result, it serves as a cost-effective alternative to these materials while retaining a high-quality aesthetic.

Practicality of PVC Foil

PVC foil is capable of adhering to a variety of surfaces, suitable for applications in different indoor areas. Additionally, it is renowned for its strength and tenacity, making it ideal for high-traffic locations. This product is always easy to maintain, usually only requiring a quick wipe down once a week with a moist cloth. Furthermore, its affordability in comparison to natural materials makes it possible to create upscale aesthetics without overstretching the budget.

Foil Design and Application

A large range of styles and finishes can be sourced from manufacturers, allowing design modifications to fit project specifications or personal design preferences. Decorative PVC foil is commonly used in residential and commercial settings, serving for applications like kitchen and bathroom cabinets, interior doors, wall paneling, furniture surfaces, retail displays, and much more.

Technical Parameters:

When it comes to thickness, our offered range varies from 0.1mm to 0.5mm. We have two width options, namely 1260mm and 1400mm. Customers can also opt for convenient 100-400m rolls, depending on requirements.

We offer an array of visually pleasing designs such as Wood grain, Solid color, Marble, Brick and so on. Customers have a wide range of surface treatments to choose from, including Matt, Super matt, Embossed, High gloss, Soft touch etc. Furthermore, we are open to provide both OEM and ODM services upon demand.

Applications:

Different Process Method for Different Application:

Throughout these five methods, customers are able to choose their best fit.

The Membrane Press(vacuum press) is suitable for covering materials on surfaces, such as MDF, particleboard and wooden boards.

With thickness from 0.20mm to 0.50mm, width between 1260mm and 1400mm, and the length from 100m to 300m, customers are able to apply this method for door, kitchen cabinet as well as any furniture. This process is also able to cover embossed boards, with efficient speed.

Wrapping Profiles requires customers to have the thickness between 0.12mm to 0.18mm, width between 40mm to 1260mm and the length from 300m to 800m. It is suitable for covering all kinds of profiles due to its flexibility, such as wood profile, aluminum profile, PVC profile, etc. This process is perfect for door frames, window sills, base channels and PVC ceilings.

Cold Laminating needs a thickness from 0.12mm to 0.20mm and a width between 1240mm to 1260mm with length from 300m to 500m. It is able to cover flat panels, such as wood panels, steel panels, aluminum panels and PVC panels, and can be used for doors and furniture.

Meanwhile, Hot Laminating has a thickness between 0.16mm to 0.30mm, a width of 1260mm and a length from 200m to 300m. It is able to cover on PVC panel, steel panel and aluminum panel, suitable for doors, skirtings and lot more.

Lastly, Self-adhesive is the thinnest with thickness between 0.10mm to 0.20mm, width range from 600mm or 1220mm and length from 5m to 50m. It is often used for furniture and indoor decorations, easy to put on all smooth surfaces.
