- Highlight: **0.18mm PVC Interior Film,**  
**0.18mm PVC wrapping film,**

## Product Description

### Product Description:

Our pvc foil is made from Polyvinyl Chloride (PVC), a synthetic plastic material known for its durability, flexibility, and ease of processing. It is available in a wide range of colors, patterns, and textures, which render it capable of mimicking the look of natural materials such as wood, stone, fabric, or metal, providing a cost-effective alternative to these materials while retaining a high-quality aesthetic.

The pvc foil can be applied to various surfaces, including doors, cabinets, furniture, walls, and more. Ideally it adheres to different substrates and can be used in various locations throughout a building, both residential and commercial. Moreover, its resilience to deterioration and strength make it perfect for high-traffic locations.

The affordability of our PVC decorative foil is one of its main advantages in comparison to natural materials. It allows for expressing upscale aesthetics without the need of worrying about related expenses. Additionally, we provide a large range of styles and finishes to give way to customizing projects to meet specifications and personal design preferences.

Maintenance is also surprisingly easy. All it needs is to be wiped down once a week with a moist cloth. This way our PVC decorative foil is commonly used for applications and can be found in residential and commercial settings such as kitchen and bathroom cabinets, interior doors, wall paneling, furniture surfaces, retail displays, and so on.

### Technical Parameters:

**Thickness:** Ranging from 0.1mm to 0.5mm

**Width:** 1260mm and 1400mm

**Length:** Between 100m and 400m per roll

**Design:** We offer a variety of designs including wood grain, solid color, marble, brick, etc.

**Surface treatment:** We offer matt, super matt, embossed, high gloss and soft touch treatment

**Service:** We accept OEM and ODM services

### Applications:

#### Membrane Press (vacuum press)

This process is used to cover MDF, particleboard, wooden board, fiberboard etc. with a thickness between 0.20-0.50mm and width of 1260mm or 1400mm in Length which reaches up to 100-300m/roll. It is used for doors, kitchen cabinet, wardrobe, furniture, etc. It covers embossed board and is capable of covering five surfaces at the same time.

#### Wrapping Profiles

The process of wrapping profiles has thickness between 0.12-0.18mm and width of 40-1260mm while Length stretches to 300-800m/roll. It is suitable for all kinds of profiles including wood profile, aluminum profile, PVC profile, etc. for door frame, window sill, base channel, PVC ceiling and more.

#### Cold Laminating

It has a thickness of 0.12-0.20mm, width of 1240-1260mm and Length of 300-500m/roll. It can be used for all kinds of flat panels including wood panel, steel panel, aluminum panel, PVC panel etc. for doors and furniture.

#### Hot Laminating

The hot lamination process includes thickness of 0.16-0.30mm with Width of 1260mm and Length stretching to 200-300m/roll. It is mainly used to cover PVC panel, steel panel, aluminum panel for production of doors, skirting and other items.

#### Self-adhesive

The self-adhesive process has thickness of 0.10-0.20mm and Width of 600mm or 1220mm with Length of 5-50m/roll. It can be put on any smooth surface for furniture and indoor decorations.
