Product Description

Anti Scratch High Gloss PVC Furniture Film 1260mm Width Thickness 0.1-0.5mm

Product Description:

Our PVC foil is primarily made of Polyvinyl Chloride (PVC), a synthetic plastic that is known for its excellent strength, flexibility, and ease of processing. We offer an array of colors, patterns, and texture varieties that can imitate the look of natural materials such as wood, stone, cloth, and metal without the extra cost.

Our foil is suitable for a variety of surfaces including walls, doors, cabinets, and furniture, and has been known to last for a long duration, making it an excellent choice for high-traffic areas. With minimal effort and cleaning required once a week with a damp cloth, your foil will maintain its premium look.

In addition to its cheap price compared with real materials, there is also a variety of styles, finishes, and modifications to choose from that can cater to project needs or individual taste. Our foil is frequently applied to wall paneling, furniture surfaces, retail displays, interior doors, kitchen and bathroom cabinets, and other uses in both home and commercial settings.

Technical Parameters:

Our company offers the best quality products. Our plastic sheeting is 0.1mm-0.5mm in thickness, 1260mm and 1400mm in width, and 100-400m/roll in length. We have a huge variety of designs, including wood grain, solid color, marble, brick and so on. Not only that, we have both matte, super matte, embossed, high gloss and soft touch surface treatments. And if you need custom products, we provide services like OEM and ODM.

Applications:

Different Process for Different Application

Membrane Press (Vacuum Press)

This process is used cover material such as MDF, particleboard, wooden board, and fiberboard which are used in furniture, doors, and kitchen cabinets with an embossed board. The thicknesses of the material are 0.20 - 0.50 mm and the widths range between 1260 and 1400 mm. The length of the roll can be anywhere from 100 to 300 m.

Wrapping Profiles

This process is used to cover wooden, aluminum, and PVC profiles which are seen in door frames, window sills, and base channels. The thickness range is between 0.12 - 0.18 mm, and the width is between 40 - 1260 mm. This material is usually found in rolls measuring from 300 - 800 m.

Cold Laminating

This process is used to cover flat panels such as wood, steel, aluminum and PVC materials. Panels are used in doors and furniture. The thickness range is between 0.12 - 0.20 mm and the width is 1240 - 1260 mm, with rolls ranging from 300 - 500 m.

Hot Laminating

This process is generally used to cover PVC panels, steel panels and aluminum panels used in doors, skirting, and other decoration. The thickness range is between 0.16 - 0.30 mm, with a width of 1260 mm and rolls ranging from 200 - 300 m.

Self-Adhesive

The self-adhesive process is used to cover flat surfaces with a thickness of 0.10 - 0.20 mm and a width of 600 mm or 1220 mm. They typically come in rolls of 5 - 50 m, which are used in furniture and indoor decorations.
