plain color pvc interior film

Product Description

Durable and Flexible Plain Color Embossed Surface PVC Membrane for Furniture/Kitchen Cabinet/Door/Ceiling

Product Description:

Our pvc foil is made from Polyvinyl Chloride (PVC), which is a synthetic plastic material that is known for its durability, flexibility, and ease of processing. It is available in a wide range of colors, patterns, and textures that can mimic the look of natural materials such as wood, stone, fabric, or metal. It provides an affordable alternative compared to these materials while still providing a high-quality aesthetic. The foil can be applied to a variety of surfaces, including walls, doors, cabinets, and furniture, and it adheres extremely well to different surfaces. Realsun Deco PVC foil is renowned for its strength and resilience to deterioration, which makes it suitable for locations with a high amount of foot traffic. Additionally, it requires very little upkeep to maintain, usually only needing to be wiped down with a moist cloth each week.

Decorative PVC foil is also cost-effective compared to natural materials, making it a viable option if creating expensive aesthetics is desired without incurring the related expenses. A large variety of styles and finishes are available from manufacturers, making it possible for you to find exactly what's needed for your project specifications or design preferences. Additionally, decorative pvc foil is commonly used in both residential and commercial settings for applications in items such as furniture surfaces, wall paneling, retail displays, cabinetry, and more.

Technical Parameters:

We offer thicknesses between 0.1 millimeters and 0.5 millimeters. We also provide widths of 1260 and 1400 millimeters. Lengths are provided in rolls varying from 100 to 400 meters. We provide multiple designs, such as wood grain, solid color, marble, and brick. We can finish with matt, super matt, embossed, high gloss, and soft touch. Specialized services such as OEM and ODM are also available.

Applications:

Membrane Press (vacuum press) is a process for creating board with a thickness of 0.20-0.50mm. It is applicable for MDF, particleboard, wooden board, fiberboard and etc and can cover 5 surfaces at the same time. The width could be 1260mm, 1400mm and the length is 100-300m/roll, which is used for making doors, kitchen cabinet, wardrobe and furniture.

Wrapping Profiles process is to cover the thickness of the wood, aluminum, PVC profile and etc with 0.12-0.18mm. Its width is 40-1260mm with a length 300-800m/roll can cover on all kinds of moulding profiles including door frame, window sill, base channel and PVC ceiling. Cold Laminating is a process with the thickness of 0.12-0.20mm, and the width is 1240-1260mm, and the length is 300-500m/roll. This process is used to cover on various panels like wood panel, steel panel, aluminum panel and PVC panel for the purpose of making doors and furniture.

Hot Laminating process uses the thickness of 0.16-0.30mm with a 1260mm-width and a length of 200-300m/roll. It is suitable for covering PVC panel, steel panel and aluminum panel to make doors, skirting and so on.

Self-Adhesive process covers the thickness of 0.10-0.20mm with 600mm/1220mm width and 5-50m/roll length. It can be put on any smooth surface to make furniture and indoor decorations.
