Product Description

0.1-0.5mm Membrane Press PVC Furniture foil for Cabinet MDF Sheet

Product Description:

Our PVC Foil is a great choice for interior decoration. The main ingredient is Polyvinyl Chloride (PVC), an artificial plastic with superb strength, elasticity, and straightforward processing. Its look can come close to that of real materials such as wood, stone, fabric, or metal, with a more reasonable price and superior visuals.

Our foil is appropriate for a wide range of materials, for instance walls, doors, cupboards, and furniture. It is renowned for its robustness and steadfastness to degradation, making it an ideal selection for high-traffic spaces. After installation, it does not need any special attention, only requiring a weekly cleaning with a wet towel.

In comparison to natural materials, decorative PVC foil requires a smaller financial investment yet is still able to create a luxurious appearance. Different styles and finishes are made available to meet the demands and individual preferences of different projects. It is often used for wall panels, furniture surfaces, shop displays, inside doors, kitchen cupboards, and other places in residential or business settings.

Features:

Product Name: PVC Furniture Film

Thickness: 0.1-0.5mm

Features: Waterproof, Anti Flame, Anti Scratch, Antibacterial, Etc.

Width: 1260mm, 1400mm

Packing: Roll Packing, Sheet Packing

Material: PVC

Keywords: Furniture Film, Thermofoil for Decoration, PVC Film for Furniture

Technical Parameters:

We offer a wide range of thicknesses, from 0.1mm to 0.5mm. The width of our product includes the standard sizes of 1260mm and 1400mm, and the length is usually within the range of 100 to 400m per roll.

In terms of design, there are various options including wood grain, solid color, marble and brick. Surface treatment includes matt, super matt, embossed, high gloss and soft touch.

Furthermore, we also provide OEM (Original Equipment Manufacturer) and ODM (Original Design Manufacturer) services.

Applications:

For different applications, there are a variety of lamination processes that are utilized:

1. Membrane Press (vacuum press) is used to cover MDF, particleboard, wooden board, fiberboard and other surfaces. This method can be used to cover embossed board, and cover five surfaces at the same time. Additionally, it can have a thickness range of 0.20 to 0.50mm, widths of 1260mm and 1400mm, and a length range of 100 to 300 m per roll.

2. Wrapping Profiles is used to cover all kinds of profiles, such as wood profile, aluminum profile, PVC profile. It is used for door frames, window sills, base channels, PVC ceilings and so on. This method has a thickness range of 0.12 to 0.18mm, width range of 40 to 1260 mm, and a length range of 300 to 800 m per roll.

3. Cold Laminating is used to cover all kinds of flat panels, such as wood panel, steel panel, aluminum panel, and PVC panel. It is used for doors and furniture. This method has a thickness range of 0.12 to 0.20mm, width of 1240 to 1260mm, and a length range of 300 to 500 m per roll.

4. Hot Laminating is used to cover PVC panel, steel panel, and aluminum panel for doors, skirtings, and other materials. This method has a thickness range of 0.16 to 0.30mm, width of 1260mm, and a length range of 200 to 300 m per roll.

5. Self-adhesive can be put onto any smooth surface for furniture and indoor decorations. It has a thickness range of 0.10 to 0.20mm, width of 600mm and 1220mm, and a length range of 5 to 50 m per roll.
