- Product Name: Wood Grain PVC Film
- MOQ: 3000m/model
- Highlight: **Embossed Wood Grain PVC Film ,
Textured Surface Wood Grain PVC Film**

Embossed Wood Grain PVC Film With Textured Surface For Membrane Press

Product Description:

Material:

Our PVC foil is primarily composed of Polyvinyl Chloride (PVC), which is a man-made plastic known for its exceptional strength, flexibility, and ease of processing.

Appearance:

We offer a diverse selection of colors, patterns, and textures for our PVC foil. It is designed to replicate the visual appeal of natural materials such as wood, stone, fabric, and metal, but with the added benefits of affordability and maintaining a high-end appearance.

Adaptability:

Our foil is suitable for a wide variety of surfaces, including walls, doors, cabinets, and furniture. It can be effectively applied to numerous surfaces and is suitable for use in different interior spaces.

Durability:

Realsun Deco PVC foil is renowned for its robustness and resistance to wear and tear. Its longevity makes it an ideal choice for areas with high foot traffic.

Maintenance:

Once installed, our PVC foil requires minimal upkeep. A simple wipe down with a damp cloth once a week is all it needs, making maintenance a breeze.

Economical:

One of the greatest advantages of decorative PVC foil is its lower cost compared to natural materials. It allows for the creation of sophisticated aesthetics without the associated expenses.

Modification:

Manufacturers offer a wide range of styles and finishes, making it possible to customize the foil to meet project requirements and individual design preferences.

Application:

Decorative PVC foil is commonly used for wall paneling, furniture surfaces, retail displays, interior doors, kitchen and bathroom cabinets, and in other home and commercial settings.

Features:

Product Name: Wood Grain PVC Film

Color: More Than Hundreds Wood Grain Design For Choose

Material: PVC

OEM: Available

Feature:

Waterproof

Anti Flame

Easy To Clean

Can be used for lamination

Perfect for doors and door skins

Can be customized for OEM orders

Applications:

Different Process for Different Applications

There are various processes available for applying coverings to different types of surfaces. Each process has its own unique specifications in terms of thickness, width, length, and the specific surfaces it is suitable for. Below are descriptions of five commonly used processes and their applications.

1. Membrane Press (Vacuum Press)

This process involves using a membrane press and vacuum to apply a covering with a recommended thickness of 0.20-0.50mm. The width can be either 1260mm or 1400mm, and the length of the roll can range from 100m to 300m. It is suitable for covering surfaces such as MDF, particleboard, wooden board, and fiberboard, making it ideal for use on doors, kitchen cabinets, wardrobes, and other furniture. Additionally, it can also emboss the surface of the covering and cover five surfaces at the same time.

2. Wrapping Profiles

With a thickness of 0.12-0.18mm and a width of 40-1260mm, this process is specifically designed for covering various profiles, including wood, aluminum, and PVC profiles. The length of the roll can range from 300m to 800m. This process is typically used to cover door frames, window sills, base channels, PVC ceilings, and other similar surfaces.

3. Cold Laminating

The cold laminating process involves applying a covering with a thickness of 0.12-0.20mm and a width of 1240-1260mm. The length of the roll can range from 300m to 500m. This process is suitable for covering flat panels, such as wood, steel, aluminum, and PVC panels. It is commonly used for doors and furniture.

4. Hot Laminating

Similar to cold laminating, this process involves applying a covering to surfaces like PVC, steel, and aluminum panels. However, it requires a higher recommended thickness of 0.16-0.30mm and a width of 1260mm. The length of the roll can range from 200m to 300m. This process is commonly used for covering doors, skirting, and other similar surfaces.

5. Self-Adhesive

This process involves applying a self-adhesive covering with a thickness of 0.10-0.20mm and a width of 600mm or 1220mm. The length of the roll can range from 5m to 50m. It can be easily applied to any smooth surface and is commonly used for furniture and indoor decorations.

Customization:

Wood Grain PVC Film Customization Service - Realsun Deco

Brand Name: Realsun Deco

Place of Origin: Foshan, China

Minimum Order Quantity: 3000m/model

Price: Negotiable

Our wood grain PVC film, also known as PVC foil for lamination, is the perfect solution for adding a wood-like finish to your furniture, walls, cabinets, doors, floors, ceilings, and more. Made with high-quality PVC material, our decorative film is available in various surface finishes including glossy, matt, embossed, textured, super matt, and soft touch.

At Realsun Deco, we offer customized services for our wood grain PVC film to meet your specific needs. Our products are designed and produced in Foshan, China, and we have a minimum order quantity of 3000m per model. However, we also offer negotiable prices for large orders. We package our PVC film in rolls for easy storage and transportation. Our delivery time is 15-20 days, and we accept T/T payments with a 30% down payment and 70% balance before shipment.

We have a monthly supply ability of 500000m, and we also offer OEM services to meet your branding and design requirements. Our wood grain PVC film comes in lengths of 100m-400m, making it suitable for a wide range of applications. Trust Realsun Deco for high-quality, customizable wood grain PVC film that will elevate the look of your products and spaces.

Packing and Shipping:

Wood Grain PVC Film's Packaging and Shipping

1. Our Wood Grain PVC Film is carefully packaged in strong and durable cartons to ensure safe transport and delivery.
2. Each roll of film is individually wrapped and sealed to protect it from dust, moisture, and other potential damages.
3. The rolls are labeled with the product name, size, and quantity for easy identification.
4. For large orders, our products are packed on pallets and securely wrapped with stretch film to prevent shifting during transit.
5. We also offer customized packaging options, such as adding logos or branding, upon request.
6. Our shipping methods include air, sea, and land transportation, depending on the customer's location and preference.
7. We work with reliable and reputable shipping companies to ensure timely and efficient delivery of our products.
8. Customers can also arrange their own shipping if they have preferred carriers.
9. We provide detailed shipping information, including tracking numbers, to our customers for easy tracking of their orders.
10. Our packaging and shipping process is designed to ensure that our Wood Grain PVC Film arrives at its destination in perfect condition, ready to be used for various applications.
