- Highlight: **Durable Super Matt PVC Film Roll, PVC Film Roll 1260mm Width**

Product Description

Supper Matt PVC Film Roll For Durable And Versatile Packaging

Product Description:

Our pvc foil, which is composed of Polyvinyl Chloride (PVC), a versatile synthetic plastic, is the main component of our product. This material boasts exceptional strength, flexibility, and ease of processing.

With a wide range of colors, patterns, and textures available, our pvc foil is designed to imitate the appearance of real materials such as wood, stone, cloth, and metal. Not only is it more affordable, but it also maintains a premium appearance.

Adaptable and versatile, our foil can be applied to various surfaces, including walls, doors, cabinets, and furniture. It is highly effective on different surfaces and can be utilized in various interior spaces.

Known for its durability and resistance to deterioration, our Realsun Deco PVC foil is a popular choice for high-traffic areas. Its longevity makes it a reliable option for any project.

Low maintenance is one of the key benefits of our pvc foil. After installation, it only requires a simple weekly cleaning with a wet cloth, making maintenance a breeze.

Not only does pvc decorative foil offer an affordable option for sophisticated aesthetics, but it also allows for easy modification to suit project requirements and individual design preferences. With a wide range of styles and finishes available, the possibilities are endless. Our decorative pvc foil is a popular choice for various applications, including wall paneling, furniture surfaces, retail displays, interior doors, kitchen and bathroom cabinets, and many other uses in both residential and commercial settings.

Width: 1260mm, 1400mm

Thickness: 0.1mm-0.5mm

Membrane press film

PVC film for lamination

Wood grain PVC foil

Applications:

Different Process for Different Application:

There are various methods for covering surfaces, each suited for specific applications. The processes and specifications for each are outlined below.

1. Membrane Press (Vacuum Press)

This method, also known as vacuum press, involves using a thin sheet of material, usually 0.20-0.50mm thick, to cover surfaces. The sheet comes in widths of 1260mm and 1400mm, and rolls are typically 100-300m in length. It is commonly used on surfaces such as MDF, particleboard, wooden board, and fiberboard for projects like doors, kitchen cabinets, wardrobes, and furniture. The sheet can also be used to emboss boards and cover five surfaces at the same time.

2. Wrapping Profiles

For covering profiles, we offer the wrapping method which uses a thinner sheet, usually between 0.12-0.18mm, and comes in widths of 40-1260mm. The rolls are longer, ranging from 300-800m, and can be used on a variety of profiles including wood, aluminum, and PVC. This process is commonly used for applications such as door frames, window sills, base channels, and PVC ceilings.

3. Cold Laminating

To cover flat panels, we offer the cold laminating process which uses a sheet thickness of 0.12-0.20mm and widths of 1240-1260mm. The rolls are 300-500m in length and can be used on a variety of flat surfaces such as wood, steel, aluminum, and PVC. This method is commonly used for doors and furniture.

4. Hot Laminating

The hot laminating process is specifically used for covering surfaces with PVC panels, steel panels, and aluminum panels. The sheet used is thicker, typically between 0.16-0.30mm, and comes in a width of 1260mm. Rolls are usually 200-300m in length and are commonly used for doors, skirting, and other decorative applications.

5. Self-adhesive

We also offer self-adhesive sheets for covering surfaces, which come in a thickness of 0.10-0.20mm and widths of 600mm or 1220mm. The rolls are shorter, ranging from 5-50m, and can be easily applied to any smooth surface for furniture and indoor decorations.
