Product Description

Product Description:

Material:

The main ingredient of our PVC foil is Polyvinyl Chloride (PVC), a synthetic plastic known for its excellent strength, flexibility, and easy processing.

Appearance:

We offer a diverse range of colors, patterns, and textures for our PVC foil. It is designed to imitate the look of real materials such as wood, stone, cloth, and metal, providing a premium appearance at an affordable cost.

Adaptability:

Our foil is suitable for a variety of surfaces, including walls, doors, cabinets, and furniture. It can effectively adhere to a range of surfaces and can be used in various interior spaces.

Durability:

Realsun Deco PVC foil is known for its strength and resilience, making it a popular choice for high-traffic areas. It has a long lifespan, making it a durable option for interior design projects.

Maintenance:

Once installed, our PVC foil requires minimal maintenance. It can be easily cleaned once a week with a wet cloth, making upkeep hassle-free.

Economical:

One of the top advantages of PVC decorative foil is its affordability compared to natural materials. It allows for the creation of sophisticated aesthetics without the high costs.

Modification:

Manufacturers offer a wide range of styles and finishes for PVC foil, making it possible to modify and customize according to project requirements and individual design preferences.

Application:

Decorative PVC foil is commonly used for wall paneling, furniture surfaces, retail displays, interior doors, kitchen and bathroom cabinets, and other purposes in both residential and commercial settings.

Applications:

Membrane Press

The membrane press is a process in which a cover is applied onto various types of boards such as MDF, particle board, wooden board, fiberboard, etc. This method is commonly used for doors, kitchen cabinets, wardrobes, furniture, and other similar applications.

Wrapping Profiles

Wrapping profiles involves applying a cover onto a wide range of profiles including wood, aluminum, and PVC. This technique is commonly used for door frames, window sills, base channels, PVC ceilings, and more.

Cold Lamination

Cold lamination is a process in which a cover is applied onto flat panels, such as wood, steel, aluminum, and PVC. This method is mainly used for doors and furniture.

Hot Lamination

Hot lamination is a process in which a cover is applied onto PVC, steel, or aluminum panels. This technique is commonly used for doors, skirting, and other similar applications.

Self Adhesive

All of the above-mentioned PVC films can also be made into self-adhesive PVC film. This type of film uses PVC decorative film as the base material and is attached to release paper (liner) using environmentally friendly acrylic pressure-sensitive adhesive. It provides a simple, convenient, and efficient way to perfectly and firmly apply the film onto furniture and other decorative items.
