## Product Description

### Product Description:

**Material:** Our PVC foil is made from Polyvinyl Chloride (PVC), a versatile and durable synthetic plastic with exceptional strength, flexibility, and ease of processing.

**Appearance:** We offer a diverse range of colors, patterns, and textures for our PVC foil. It can mimic the look of natural materials like wood, stone, fabric, or metal, but at a more affordable price point while maintaining a premium appearance.

**Adaptability:** Our foil is suitable for a wide range of surfaces, including walls, doors, cabinets, and furniture. It is effective on various surfaces and can be applied in any interior space.

**Durability:** Our PVC foil, produced by Realsun Deco, is renowned for its strength and resistance to deterioration. It is a popular choice for areas with high foot traffic due to its longevity.

**Maintenance:** Once installed, our PVC foil requires minimal upkeep. A simple wipe down with a wet cloth once a week is all that is needed, making maintenance a breeze.

**Economical:** One of the greatest advantages of PVC decorative foil is its lower cost compared to natural materials. It allows for the creation of sophisticated aesthetics without the associated expenses.

**Modification:** Manufacturers offer a wide variety of styles and finishes, making it easy to customize and meet project requirements and individual design preferences.

**Application:** PVC decorative foil is commonly used for wall paneling, furniture surfaces, retail displays, interior doors, kitchen and bathroom cabinets, and other applications in both residential and commercial settings.

### Applications:

Membrane Press is a method of covering materials such as Medium Density Fiberboard (MDF), particle board, wooden board, and fiberboard with a thin layer of material. This can be used for various applications including doors, kitchen cabinets, wardrobes, and furniture.

Wrapping Profiles involves covering different types of profiles, including wood, aluminum, and PVC, with a thin layer of material. This can be used for applications such as door frames, window sills, base channels, and PVC ceilings.

Cold Lamination is a process that involves covering flat panels, such as wood, steel, and aluminum, with a thin layer of material. This is commonly used for doors and furniture.

Hot Lamination is similar to Cold Lamination, but specifically used for covering PVC, steel, and aluminum panels. This process is commonly used for doors, skirting, and other similar applications.

Self Adhesive PVC film is available for all of the above-mentioned materials. It is made with a PVC decorative film as the base and is attached to a release paper using an environmentally-friendly acrylic pressure-sensitive adhesive. This allows for easy application onto any surface, making it a simple, convenient, and efficient option for furniture and other decorations.
