Product Description:

Our PVC Decorative Film is a high-quality, versatile product designed to enhance and protect a wide range of surfaces including furniture, cabinets, doors, walls, ceilings, and profiles. Manufactured using premium PVC material, this decorative film offers exceptional durability and aesthetic appeal, making it an ideal choice for both residential and commercial applications. Whether you are looking to renovate your interiors or add a stylish finish to new installations, our PVC membrane foil provides a reliable and cost-effective solution. Available in widths of 1260mm and 1400mm, our PVC Decorative Film offers flexibility to accommodate various project requirements. The film comes in rolls ranging from 100 meters up to 400 meters in length, ensuring you have ample material for large-scale projects or multiple smaller tasks. This range of sizes allows for easy handling and installation, reducing waste and improving efficiency on the job site.

One of the standout features of this PVC membrane for furniture is its non-toxic composition. Safety is a top priority, and our film is produced with materials that do not release harmful chemicals, making it safe for indoor use in homes, offices, and commercial spaces. This non-toxic nature also makes it suitable for application on surfaces that come into close contact with people, such as furniture and doors.

In addition to being non-toxic, the PVC decorative film is anti-flame, providing an added layer of fire resistance to your surfaces. This feature is particularly important for areas that require higher safety standards, such as commercial buildings, public spaces, and homes with children or elderly residents. The anti-flame property helps to prevent the spread of fire, contributing to overall building safety and compliance with fire regulations.

Moisture-proofing is another critical advantage of our PVC door foil and membrane. Moisture resistance ensures that the decorative film maintains its integrity and appearance even in environments with high humidity or occasional exposure to water. This makes it an excellent choice for kitchens, bathrooms, and other areas prone to moisture. The moisture-proof characteristic also prevents warping, bubbling, or peeling, which are common issues with lower-quality films when exposed to damp conditions.

Our PVC membrane foil is not only functional but also aesthetically pleasing. It is designed to mimic various textures and finishes, allowing for versatile design options that can complement any interior décor style. Whether you prefer a sleek modern look or a classic wood grain finish, our decorative film can provide the desired appearance while enhancing the durability of the underlying surfaces.

Installation of the PVC decorative film is straightforward due to its flexible and adhesive-friendly nature. It adheres well to a variety of substrates, including wood, metal, and plastic, making it suitable for use on furniture, cabinetry, doors, walls, ceilings, and profiles. This ease of application helps reduce labor time and costs, making it a practical choice for contractors and DIY enthusiasts alike.

In summary, our PVC Decorative Film stands out as a superior choice for anyone seeking a durable, safe, and attractive surface covering. Its wide range of applications, non-toxic and anti-flame features, moisture-proof capabilities, and availability in convenient widths and lengths make it an excellent investment for both new construction and renovation projects. Whether you are using it as a pvc door foil, PVC membrane for furniture, or pvc membrane foil for walls and ceilings, you can trust this product to deliver lasting performance and beauty.

Applications:

Realsun.Deco.PVC.Decorative.Film, originating from Foshan, China, is an exceptional choice for various application occasions and scenarios due to its versatile properties and wide range of surface finishes including glossy, matt, embossed, super matt, and soft touch.

Designed with thickness options ranging from 0.10mm to 0.50mm and lengths between 100m to 400m per roll, this PVC membrane for furniture offers both durability and aesthetic appeal, making it ideal for enhancing the appearance and protection of different surfaces. One of the primary application scenarios for Realsun Deco's PVC decorative film is in the furniture industry. The film's excellent adhesion and finishing qualities make it perfect for use as PVC membrane for furniture, providing a stylish and durable surface on cabinets, wardrobes, tables, and other furniture pieces. Its ability to mimic natural wood grains through the pvc wood grain foil option allows for a high-end look without the cost and maintenance of real wood. This makes it particularly suitable for modern furniture manufacturing where cost-efficiency and design flexibility are crucial.

In addition to furniture, Realsun Deco's PVC decorative film is widely used in the production of doors and interior panels. The pvc door foil variant offers an excellent alternative for door manufacturers seeking to produce doors with a refined appearance and enhanced surface protection. Its resistance to scratches, moisture, and wear ensures that doors maintain their aesthetic and functional qualities over time, making it a preferred choice for both residential and commercial building projects.

Beyond furniture and doors, the film is also applicable to wall coverings, ceilings, and profiles, offering architects and interior designers a versatile material to create seamless, decorative surfaces. Its packaging in rolls and a supply ability of up to 500,000 meters per month ensures that large-scale projects can be accommodated efficiently. With a minimum order quantity of 3000 meters per model and negotiable pricing, Realsun Deco caters to both small and large enterprises, providing reliable delivery within 15-20 days and flexible payment terms of T/T with 30% down payment and 70% balance before shipment.

Overall, the PVC decorative film by Realsun Deco stands out as a practical and stylish solution for furniture, cabinetry, doors, walls, ceilings, and profiles, offering excellent surface finishes and durability tailored to meet diverse decorative and protective needs.
